Title:

Comments: The preservation of our unique and beautiful rivers are at stake. With the loss of/deterioration of many other natural resources and lands in this country, we must work towards preserving what we have left to the best of our abilities. This project is not in line with this school or thought/belief. I urge you to reconsider the implications of this project and help us preserve the beautiful lands and waters our great state has to offer that many other states do not.
