First name: Aiden

Last name: McLean

Organization:

Title:

Comments: This draft environmental impact statement must be re-analyzed. It does not take into account the effects of mercury, arsenic and other harmful metals have on natural bird populations. It also mentions recreation as an important factor to keep intact however the recreation part of the plan does not lay out how recreation will be protected. This project must be put on pause until an acceptable DEIS has been drafted. This mine will be detrimental to the well being of the South Fork or the Salmon.
