Title:

Comments: To whom it may concern:

I am Landon Greenshields and I do not support the Stignite Mine Project because of the effects and the possible effects that will be caused by the mine like destruction of habitat, possible toxic runoff waste, destruction of critical fish spawning ground, land degradation, noise, dust, poisonous gases. The effects can dampen the environment, not fully restoring it to its full capability that it once was before the mining. In the short run the mine would work but in the longer run the mine will kill the real heritage of the people, the mine could have the possibility of killing the fish and ruin the natural scenery because the mine had to reroute a stream or streams.

The Value of the land will drop just because of the effects that the mine had brought. There will be no access to almost 20,000 acres for almost 20 years which 75 percent of the land is publicly owned and it will have restrictions on it because of the mine that the Midas Gold Company and the government has put on it. The land clearly could be used for hunting, fishing, white watering, hiking, est.

I can see that the Stibnite mine can bring valuable earth metals to help with human needs like jewelry, electrical wires for electronics, wires to route electricity for homes or for other tools, for building homes, hospitals, schools, vehicles, bridges, roads, airports and much more.
