Comments: Objections to the Twisp Restoration Project

I object to the treatments proposed for this project. Specifically any road building, commercial logging, prescribed fire, and any mechanical alteration of stream, riparian, or aquatic habitat.

I oppose any actions/treatments in Forest Plan Old Growth, Late Successional Reserves, Riparian Reserves, and Sawtooth Inventoried Roadless Areas. The Forest should review why their experts recommended protection of those areas and previous managers included that protection in the Forest Plan.

I oppose any Amendments of the Forest Plan; those amendments will disregard the judgements that led to their inclusion in the Forest Plan.

This proposed plan is a continuation and expansion of the District's Mission Restoration Plan and should be treated as another potential cumulative adverse effect on the Methow watershed requiring a comprehensive Environmental Impact Statement.

Sincerely,

Dr. Donald W, Johnson

Retired Biology Professor

Fisheries Professional Emeritus

Member, Libby Creek Watersheds Association
