Comments: Dear Ranger Stull,

I am writing in support of the Bobblets Gap Vegetation Project. As a Ruffed Grouse Society volunteer, I am interested in wildlife habitat and particularly, Early Successional Habitat. The proposal creates ESH in an area that has little of it, according to the analysis. The ESH-creating treatments (along with the post-harvest wildlife habitat work) should benefit Young Forest wildlife, as well as promote forest health and produce forest products.

Thank you for the opportunity to comment on this project,
Tom Pratley
