Comments: I have no problem with the proposed powerline to the star, but I DO feel that the solar powered system that was tried, was not properly designed. I have used solar power for almost 20 years, and have found it to be quite reliable if the proper design is implemented.

More to the point, I love the idea of the Star being lighted at night. And I am excited to see it happen!

Solar would, in the long run, Be a less expensive proposal. But I'm for the project either way. Has a professional solar power designer been vetted?
