Comments: To allow Berlaimont is simply wrong! To allow development in a wild area is wrong! This area has been protected winter range habitat for deer and elk for years and to now allow development is wrong. The area is also home to sage grouse and other endangered species. This is an inholding with adequate access which was known when the property was purchased. To allow development sets a dangerous precedent. Eagle County does not need another high end development. Eagle County needs habitat for our declining elk and deer populations and our sage grouse and other species. With climate change and ever present fire danger this development endangers fire fighters and puts other residential areas at risk. Please deny Berlaimont.
