Title:

Comments: As an employee of union phosphate mine I believe that mining is one of the best economic growth jobs in the state. The union supports taking care of the employee. IF a company is taking care of their employees' then they will take extra care in the work sites as well as the environment that it impacts. I support any/all Corporations that see the potential of mining in Idaho, especially when employees and the environment are taking into consideration in the beginning stages of development.
