Comments: I look to Alaska for its robust fisheries industry and my friends work in Alaska as guides in the wilderness. I am tired of expansion of mining rights without any regard for other resources in the area (some of the intangible). I am firmly against the Greens Creek North Extension Project. Stop mining the world out. If you can't store the tailings in the way you originally planned then you should stop mining and creating tailings. I am worried that there will be a mining accident in this area and any heavy metals from the tailings will run off into the water table. But you don't actually care about my comments, you just care for the company that is lining your pockets. Stop expansions like this, stop mining, and find a different way to deal with your waste that is not just dumping in on the ground.
