Comments: In 2019 I toured all areas of the Kensington Mine, both above and below ground. The character and feel of the entire facility reflected an obsessive commitment to personal and environmental safety in every respect. My observations revealed final restoration was always a primary concern at the center of all activities. I have visited numerous similar sites and can frankly say I have never seen a more tightly-run operation. Hundreds of working families in Alaska are depending upon this environmentally-conscious enterprise. I recommend, without reservation, Kensington be allowed to continue operations as proposed.
