Comments: Dear District Ranger Furr,

Please keep moving forward with this project. Do not let the eco terrorists compromise this work that our forests so badly need. Thank you for your time and efforts.

This comment is to support the Twisp Restoration Project. There is a heightened need to reduce the risk of wide scale disturbances including insect and disease outbreaks and stand-replacing wildfire on the national forest, especially near homes within the Wildland Urban Interface. It is important to use the range of forest management tools to conduct commercial and non-commercial treatments that help thin overstocked stands, manage fuel loads and ensure a more resilient watershed.

A healthier forest will also provide better habitat for wildlife and fish, and provide better conditions to promote the growth of larger trees. In addition, removing danger trees along roadways will help ensure safer access throughout this part of the national forest. Please move forward to restore the health of the national forest through this project.

Sincerely,

Dale Amberson
