Comments: Thank you for this proposal for a large-scale restoration of the Twisp River area. I certainly support the need for restoration and fire resilience. At the same time, I want this project to retain the scenic beauty and recreation potential of the area. The amount of various kinds of logging in the project area has me concerned that there would be serious impact to that scenic beauty and recreation potential. Included in my concern is the proposed logging of trees larger than 20" in diameter. The logging that is done should be in the interest of forest resilience and restoration only.

Another concern is the ATV access in the upper Twisp River - this should be addressed separately from this proposal since ATV access is a controversial subject in general.

Also, the public needs to have input along the way for a project of this scale and time-frame since it has the potential to impact a lot of valley residents for many years to come.

Thank you.
