Comments: I am a student that has been a resident of Twisp for my entire life. I believe that while we greatly need restoration, some parts of this project may be unnecessary and/or harmful to the current state of our forests and land. Proposed "restoration" ideas such as additional road construction and the allowance of new ATV access seem to be generally more harmful than helpful to our environment and should be altered or removed entirely from this proposal. Additionally, I believe that the community should be allowed much more commentary and decision in many of these matters, as we will be the most affected by the outcome of this project. This could greatly improve the end result of the proposal presented and in doing so, it would continue to improve the conditions of our environment in future years.
