Comments: I agree with the necessary analysis and precautions needed. Without a detailed plan of how the disturbances would be minimized and returned to near natural, I rely on the Forest Service's expertise to manage those activities appropriately. Will any funds be set aside to guarantee restoration activities, and/or are there provisions to assess penalties for incomplete clean up and restoration? Will there be a benchmark natural analysis and subsequent monitoring of the riparian zones and potentially impacted species populations to assess eventual impacts? Thanks for all you do to provide a quality outdoor experience to all Americans.
