Comments: I have been an ONF adjoining landowner since 1974, and want a future forest that is healthy for trees, plants and wildlife

Future forest conditions need Forest Service projects that will improve air, water, and soil quality and mitigate the results of climate change.

The comments of George Imrie are words of a science professional and sound advice, please take his below key points seriously.

Reduce the use of controlled burning to improve air quality.

Examine how Off Road Vehicle use causes soil erosion, and protect fragile areas.

No oil or gas production on Forest Service land.

Sell carbon sequestering Co2 credits. Communicate and collaborate H.R. 5859 AR Rep. Bruce Westerman's The Trillion Tree Act.

As George Imrie concludes, climate change is causing unprecedented species extinctions. The Ozark National Forest has some of the last large blocks of relatively undisturbed wilderness. Please disturb less and conserve more. Expand your expertise to create a plan the helps to improve the air, water and climate for all.
