Comments: Re. Ozark Vegetation Management EA and Plan Amendment #58633

The United States is best positioned to be the world model for sustainable forest management and the preservation of old growth and wild areas.

Please adjust your plans to mitigate the adverse effects of climate change. Consider carbon sequestering and selling Co2 credits and other practices.

Please no oil or gas production on USFS land.

As has been noted, the Ozark National Forest has some of the last large blocks of relatively undisturbed wilderness. Please preserve these and protect fragile areas by limiting Off Road Vehicle use and other protections.

As a local landowner since 1980, I value your service to us locally, to our nation and to the world. We count on you to develop and maintain a healthy national forest.

Thank you for your service.
