Comments: Hello & Good Day,
i appreciate this opportunity.
Being a practitioner of Permaculture Design, PCD, i suggest all forest service managers, even personnel, take a 2 week intensive PCD course.

Per rangeland management of any "livestock" :
it seems to me that all invasive plants and all resulting erosion, etc,, in our federally "managed" lands, which are owned by the people to the USA, were introduced by privately owned livestock.

"Livestock" allowed to range freely are hugely destructive of native flora and thus fauna.

In order to heal this atrocity ANY/ALL "grazing" of "livestock" MUST be required to mimic "browsers" per "regenerative" farming and rangeland management per the strategy/techniques developed by Alan Savory.
https://savory.global/holistic-management/

In other words all "livestock" needs to be moved daily!

Yours for New and Healthier Times, Larry
