Comments: I do have some concerns about what you are proposing. The last time you did a prescribed burn in the East fork it got out of control and burned the mountains behind the meadow. What will you do to make certain that this is not going happen up on Schultz saddle. If you can not control the fire it will be in our back yard in hours. I see one paragraph That makes me think you may not have the personnel to maintain and control the burn.{{This area contains large amounts of deadfall and snags, presenting safety concerns for firefighters, field personnel

,and the public}}.If you are unwilling to commit all the resources needed to control it until it is completely extinguished. We do not need another 2000 disaster in the East fork.
