Comments: As an ORV recreationalist/trail bike rider in this area for +35 years I very much appreciate the trail system and investment made in it. I also want to see fire management and water management take place to assure both safety and forest health as well as water availability. Some of the actions of this project involve eliminating parking and dispersed camping along the road system proximate to the trail system and I don't understand why. We already have a busy parking/camping situation in this area that limits trail access, as well as limited trails themselves. Providing more, not less, of trails, camping and parking minimizes the impact and that seems like a desirable outcome. I'll happily talk with staff about my concerns if they have questions and already work to keep this trail system open and at times, maintained. Please help us maintain a world class experience on the trail system while meeting the other needed goals surrounding fire and water. Thank you.
