Message

To Whom it May Concern:

The Tongass National Forest is a vital tool to combat climate change. The Tongass is the biggest national forest in the U.S. and arguably one of the biggest tools in our arsenal to confront climate change. In addition to the many other gifts, trees pull carbon from the atmosphere and store-or "sequester"-it. This and so much more you are well aware of concerning the preservation of this vital world resource. PLEASE do not allow the roads built, the forests cut and the whole ecosystem destroyed for no other reason that greed. We do not need the lumber, in fact, there aren't mills that mill Old Growth forest anymore! Or MAYBE one or two, if so. And where? Surely not in close by. If the current administration enforces this destruction upon you, PLEASE stall as much as possible so that the new administration can save this horrid act from happening. What more can I say? Where do I send my comments to besides you? Thank you very much, \*Deborah Call\* Anacortes, WA.
