Comments: This project will result in temporary trail closures. To "ease the pain" of these closures, mitigate frustrations and minimize the negative economic impact here are solutions:

Lifting closures any time there will be more than a two-week no-work gap in operations.

Utilizing existing, numerous roads as trail detour routes instead of a complete trail closure. SWCCA volunteers are willing to assist with the trail detour routing and the placement of temporary guidance signage.

Only close the trail section when there are dangerous operations within a defined buffer around the trail.
