Comments: we need to look at managing our forests to help prevent forest fires like we have seen in the last several years. Somehow mark trees and let local residents pull permits (even a small charge for permit) to cut the trees down and remove to use as home heating etc. Maybe even National Guard could help (a better use than the US Capital "guarding" deployment). Maybe even have some permits for older/disabled people to purchase that the Guard has cut (maybe even load) for pick up. The forests need thinning and cleared out so the people can do our part in helping with the "carbon footprint".
