Comments: I would recommend that you add a slow down feature in the chairs. For example Purgatory has a coaster like the ones you want to make that allows you to slow down by pulling a handle. This allows scary cats like me to still enjoy the ride at my pace and helps little ones that get scared to slow down. It makes the ride more enjoyable. I'm sure if you guys contact Ourgatory Restirt they could share with you what they used and how they made that work for their ride that can go super fast, but gives that great option to slow down when needed :)
