Comments: Whoever came up with this idea is brilliant! BRILLIANT!

The mountain coasters in the Swiss and Italian Alps are truly an amazing thing to visit, and I believe this would be a fantastic addition to the Albuquerque area, drawing not just tourists and tourist income, but local income interest and income as well. In fact, it would probably become a favorite thing for us to bring guests to. And it also perfectly fits the type of tourists that we get - those who love to hike, backpack, and be immersed in the beautiful Sandias!

In addition, I believe this would be fairly low impact on the environment (if it is the gravity ones like in the Alps).

So do you think, just like the Tram, you could also make this the longest gravity coaster in the world? :). That would be a truly world class attraction!

Please make this happen! :)
