Comments: My concern in adding a roller coaster is 1) the additional traffic. 2) noise pollution from motor vehicles 3) trash 4) coaster vs mtn bikers and trail interference 5) visual noise to our natural environment 6) crowds. The benefit is jobs, revenue to our mountain and tourism uptick. Is there a balance? What are the controls? Who controls it? The increase in interest with our natural environment has been huge with the pandemic but it has the downside of excessive use of trails, people making new trails, people not picking up after their dogs, pollution, excessive speeders on the crest road that reduces safety for other people and especially cyclists. Again, is there a balance for multi use areas in our outdoors without safety risk, noise pollution, overabundance of people?
