Title:

Comments: Can someone please explain to me how cutting down trees and removing them improves a wildlife habitat? I grew up in Glacier in the 80s and 90s. I served in the US Forest Service in the early 2000s, working at the Glacier Public Service Center, telling visitors about the area. I know Glacier and its history better than most anybody.

I fail to see how this project benefits the local wildlife or the permanent residents of Glacier. What I see here is the Trump administration's deregulation placing industry and real estate projects over environmental conservation. This project is just a scheme by employing class parasites to destroy my community's forests in order to make space to build more vacation homes for their ski trips.
