Comments: If I understand correctly, the proposed logging roads will lie across and next to the trails. I think the hindrance of recreation at this time is a definite downside of the project. I understand and agree with fire mitigation and forestry management. however, if trails are not rerouted around logging to maintain the level of current recreation, this will impact the community negatively. It will impact ability to safely recreate outside as we get COVID under control and therefore impact health. There will be less trail to spread out hikers, trail runners and bikers. It will impact recreation economy of town as well. To be real, biking on trails with logging is not the same and people may avoid the area. So, I hope that with this project, for the trails that will be impacted, there will be an equal number of reroutes to continue safe recreation. Thank you.
