Title:

Comments: I support the careful mitigation of our forest to prevent beetle kill and wildfire. Recreation uses also must be protected and any existing trails that are effected should be allowed to be rerouted prior to the heavy logging truck traffic without going thru a long and slow approval process.

Post logging remediation should be quick and well funded on a ongoing basis as the affected area and or trail are no longer active with logging operations. Don't wait until the whole project is done years from now to repair the trail system segments.
