Comments: After reading the purpose and priorities 1 and 2, I fully expected maps and/or discussion of beetle kill and ponderosa quality levels. Instead a reference to the San Juan Forest Management Plan (2013) was given where I assume these details are given. Considering this EA is justifying that an action be performed to help the forest, maybe you should have told your readers about the current status of the forest instead of referring them elsewhere. So my comment is: In order for this EA to be complete, data from SJFM Plan 2013 should be included instead of referenced, thereby allowing the reader to evaluate the current forest status.
