Comments: I would request the ski area in partnership with USFS would not expand and instead remove the deadfall in existing runs which in turn would provide more skiable terrain that already exists. This would also provide some fire mitigation to reduce potential fire impacts. The areas that, I believe, need serious clearing of dead fall are the trees skiers left of Snag and right of Deadspike, skiers left of Wapiti, and skiers left of Lower Bull Run. Also consider pushing the border out from McCormacks Maze. Also, I think the ski area should improve the current infrastructure of its lifts and include energy production for the new lifts that have less of a carbon footprint. A new chair 5 would be a start that actually runs all week.
