Comments: Please do not upset the family units of the horses! Mismanagement of the wild horses has compromised genetic viability already across the US by the BLM's non scientific policies. They ignore proven methods of birth control that are safe and effective and continue with the cruel and dangerous to the horses round ups. They continue to use these policies over and over, year after year, instead of changing to safe and effective methods! Why? We, the taxpayers, are funding this whole debacle and we are sick of it!
