Comments: When you say that there is an increased demand in requests for helicopter skiing, can you tell me how many requests were received per year prior to 2018 and then for 2019? Also, helicopters are quite noisy, have any complaints been lodged against this activity? Is there an increased possibility of avalanches when this activity occurs? What is done to mitigate avalanche development? What effect does the extra helicopter noise have on the wildlife or the current level of noise pollution? How many days per year will this activity be permitted to occur based on weather conditions and snow cover? Thanks.
