Comments: I think the plan makes sense and I would support it with the following additions: I believe the mechanized (bicycle) definition should be expanded to make it clear the use of ebikes on the trails, and more specifically that Class 1 pedal assist - no throttle ebikes are allowed. These bikes do not make any motorized sound and do not move without pedaling. There is a good discussion about the 3 classes of ebikes on this link: <https://www.bosch-ebike.com/us/everything-about-the-ebike/stories/three-class-ebike-system/>. My wife and I are 66 years old and these ebikes have opened up a whole new world of trails, however some people believe these bikes should be classified as motorized vehicles when all the bike is doing is helping us push the pedals when we need it. The link says the general regulation has been enacted in Idaho, but I am not sure where to verify this. Thanks.
