Title:

Comments: My name is Linda Conroy. I am a resident of Whatcom County and profoundly grateful for the natural beauty of this area.

It is of utmost importance to me to strongly urge that the USFS conduct an EIS and NOT choose Alternative !.

Given all the scientific research, studies and our experiences of flooding, and extreme winter storms along with continuous rise of temperatures confirming that we living in a time of an ever escalating global climate crisis, even considering a "management project" that would open up 1800 acres of forest in the Nooksack watershed to clearcutting seems to be a serious denial of verifiable facts of the HUGE importance of tress.

As we know, clearcutting would also adversely effect salmon habitat and result in further erosion/landslides,

Thank you for hearing my strong objection to Alternative 1.
