Comments: I strongly oppose the establishment of a roller coaster in the Sandia Mountains. The forest and mountains are a natural preserve, not an amusement park. We are witnessing a loss of wild places and encroachment into the habitat of New Mexico wildlife. Even seemingly small changes can have a devastating effect on the natural environment and wildlife; and a roller coaster is not a small change. Climate change is already having an adverse effect on the natural environment. At present, the ski area is the only large scale disruption in the upper mountains, and it is limited to winter months. The noise and activity during the remaining months will make this a year-round intrusion. This is a travesty. I am also writing to our representatives in congress. Please prohibit this ill-conceived project.
