Title:

Comments: I implore those who are stakeholders to not develop any or part of the Sandia mountain range, there is not any evidence of how this could impact the environment or the community. The Sandia range is a unique and valuable natural resource and developing could have serious effects on animals, locals and how to manage issues like rain run off. It is well known the gradient is over a mile long from mountain base to Rio grande river, what could be potential hazards of erosion and flash flooding? Please do not develop what is not rightfully yours. The Sandia's are sacred and purposeful.
