Comments: I hope that the USFS sticks with Alternative 2. The largest trees need to be kept in the watershed. Every tree over 22" needs protection! Wide buffers for fish need at a minimum of 300'. All temp roads need to be decommissioned, reconstruction and recontouring. No new roads need to be constructed because of the high road density already present in the watershed.

Thank you for accepting my comments today and I wish to be kept informed of your decisions on this project
