Comments: I strongly object to North Fork Vegetation Management Project which includes clearcutting. Since there were 2 plans in the Environmental Assessment, it is important to use Alternative 2. This will allow for more trees that are not important to the timber industry to stay in place to help with climate change and soil stability. In 2008 I was witness to a landslide on my property in the South Fork Valley. I saw firsthand how clear cuts and logging practices adversely effected my property and my neighbor's property. Luckily no life was lost! Please consider the long term effects of this out dated logging practice.
