Comments: Hello I am a Washington resident and lover of the nature we have been granted to care for. The Nooksack is an important river and watershed and the trees around it provide a necessary buffer to to protect the sacred waters. I encourage you to do an environmental impact study and consider not clear cutting 1800 acres of forest. Please consider the alternative plan that is favored by many and does not just clear cut this precious resource but rather manages our forests sustainably. Our trees are our livelihood, let's care for them even as we find ways for economic prosperity!
