Comments: I am opposed to clear cutting in the Upper North Fork Nooksack River Basin. We must begin to preserve our forests to help combat human induced climate change. Hilary Franz has spoken of this need and I am in agreement with her. We need to begin a transition to other sources for our paper, pulp and tissue needs and only sparingly harvest our precious wood for the most specialized building and finishing needs. Clear cutting is an outdated method of forest management that must be stopped. Please reconsider this action.
