Comments: Alternative 2 makes more sense.

Option 1 WILL outrage the community. Everyone is talking about this, from glacier businesses to people on the trail systems. We just spend tons of money to remove the Nooksack Dam for the health of the river, and now we propose to clear-cut the tributary?

I advocate for Alternative 2, modified to give additional consideration to identifying Riparian Reserves and treatment plans in riparian areas, particularly within the Canyon Creek subwatershed. I believe this alternative will restore ecological processes to improve the health of this forest in the long term, while safeguarding soils and habitat in the short-term, and still provide commercial return for timber products.
