Comments: The plan sets the AML extremely low at just 50-104 wild horses on 19,700 acres. Even at high AML, that's one horse for every 394 acres! This range is far too low to maintain a self-sustaining, genetically viable population of wild horses in the Territory.

With the new A

What is this all about except you are in the back pocket of lowery ranchers..Thos cows are tearing up the land and unfortunately you are in a building and have no idea what is going on.

This is not equal and the cattle are not a native species. The horses are native to America.

More peopl are on the side of horses in the wild

D than the cattle. You need to stop destroying what belongs to the American people..

You are in the back pocket of a politician and I am glad there are others speaking up..one has to be aware of govt incorrect action to protect our wild life and the environment. You are one who is in the wrong

Stop this action and leave the horses alone.

Cheryl. Kindschy
