First name: Diane

Last name: Ensign

Organization:

Title:

Comments: the AML is way too low at just 50-104 wild horses on 19,700 acres. Obviously this is way too low for a self-sustaining, healthy population of wild horses to survive this area.

Cattle are given all protections to graze this area without regard to our intelligent horses. This must be changed so horses are given equal importance to use the land.

Please relocate any horses that strayed out of the boundary & not allow anyone to shoot them. Implement extremely stringent penalties for any who shoot these incredible animals.

As far as fertility control goes if so few horses remain in the area the herd would be soon be wiped out if used & there are no new foals or colts being birthed. Definitely IUD's should NEVER be used as infection, etc. would be occurring. The only safe fertility control is PZP.

The awful holding facilities that way too many wild horses are already in does not need more overcrowding so horses should be adopted out & caught up then rather than the frightening helicopter stampedes. Horses should not be separated from their families & best friends & put in horrific crowded holding pens. They deserve more land & less cows need to share the land.

Sincerely, the entire Ensign households 5556 n. maria Dr. tucson Az. 85704
