Comments: The U.S. Forest Service recently released a Territory Management Plan for this unique band of horses that, among other things, will result in the decimation of the horses' population to as low as 50 on close to 20,000-public land acres! Meanwhile, the agency permit thousands of head of cattle to graze within the horses' habitat.

Leave the horses alone. Do not allow cattle to replace horses.

NO culling of wild horses!!!
