Comments: Why is this happening? Cattle taking over the land and the obvious wiping out all of the Herber Horses? The last population survey in the Territory found that many of the horses were outside of the Territory boundary. Instead of immediate removal, the Forest Service should make every effort to relocate those horses within the boundary Please Relocate them the Forest Service must adjust livestock use in the Territory in order to give wild horses their fair share of the resource. Forest Service must manage these horses accurately-

With the new AML, at low AML, wild horses are provided just 600 Animal Unit Months while cattle are permitted 5,730 Animal Unit Months to graze within the Territory? Look at those numbers they are way out of balance 5738 destroying the land all for Beef? This Is Wrong to Do this- horses have had

enough suffering These horses have been persecuted for years and someone very Sick is shooting them letting them die and suffer and nothing is done about it! Is that not part of your job to investigate and to stop who is doing this?

It seems to me that with all of the Cattle invading more each year that the Perpetrator might be some Rancher or is connected to them Please include in the plan a more fair number of these horses who are loved by people from all over the country and world and relocate them
