Title:

Comments: The west has been under drought for many many years and needs LESS livestock grazing, not more. Livestock grazing only benefits a few, while preserving the land and watersheds benefits the rest of us. Livestock grazing does NOT feed this country either, and you know that. Welfare ranchers really need to find other employment that is NOT at the expense of the rest of the country. What's more, cattle grazing makes fire hazards worse in the time of drought. NO MORE COWS on public lands.
