Title:

Comments: To Whom It May Concern,

I am opposed to allowing and/or expanding grazing in any wilderness areas. I am opposed to allowing private gain on public land any time but the expansion of these so called grazing rights is wrong and not based on science. This is obviously being introduced to curry some favor with some rich person and as an ordinary citizen of the US, I am so opposed to that kind of thing.

Please protect our forests and wilderness areas and manage them with the long-term future of the land and wildlife in mind.
