Comments: I don't believe we are going to add more grazing land as we should have been deleting more for a long time. The ranchers have a perfect thing going by using the public's land for practically nothing and making a profit on something that should have been stopped a long time ago. The grazing of cattle is extremely destructive to the land and animals that live there. Please consider thinking more about the effect this has on public lands and don't be swayed by the lobbyists for cattle ranchers. Thank you , Doug Taylor
