Comments: The Rangeland Management Directives have the potential to significantly affect millions of acres of public land, including Wilderness, where livestock grazing is fundamentally at odds with the mandate of the Wilderness Act that Wilderness remain "untrammled."

Livestock grazing on National Forests, including millions of acres of Wilderness, significantly degrades our public lands. Impacts from grazing must be fully examined and addressed through a transparent, public process that complies with federal laws, including the National Environmental Policy Act.

Any revisions to Forest Service grazing policies should encourage and prioritize voluntary grazing permit retirement to reduce permitted livestock grazing across the National Forest system, including within Wilderness, so as to protect Wilderness, other public lands, and wildlife.

The FS should not return grazing to the excessive levels permitted in the 1960s when it is clear conditions oftentimes cannot support increased, or even current, grazing levels.

The Forest Service must develop policies that ensure the agency will maintain authority for grazing management decisions and hold grazing permittees accountable for the impacts their livestock has on public lands.

The recovery of imperiled or threatened species needs to be prioritized on National Forests and livestock grazing managed so as not to jeopardize species' recovery.

This leftover Trump administration proposal to increase grazing would not only fuel livestock grazing's contribution to the climate and biodiversity crises, but runs directly counter to the Biden Administration's 30x30 land conservation agenda by sacrificing what could be protected lands to the commercial livestock industry. Our country should be working to develop and support the "alternative meat" industry, which is wildly popular. Doing so would decrease the energy expenditures for growing and processing animals for food by an immense amount. Giving up meat for a year in fact saves more greenhouse gasses than not driving your car for that whole year.

The Forest Service must do the right thing for Wilderness, other public lands, and wildlife by dropping its proposed Rangeland Management Directives.

If the Forest Service wishes to amend its directives, the Forest Service must undertake a more comprehensive rulemaking process that complies with the National Environmental Policy Act.

I live in a big city, but have visited the Great American West many times. As a country, I see ourselves slowly dissolving the fabric of our ecosystems by allowing further development of any sort, and the American Wilderness is the last stand we have to make sure our clean air and water last. It is the last place where we can share the planet with God's other creatures. It can help us help solve climate change, which certainly seems to be getting the better of us. We are already paying more for insurance to cover natural disasters and the ill effects of poorer air quality, and we need to reverse course if only to not empty our wallets. Are we really so foolish that we'll take the bolts out of the plane while we're flying it?

Thanks
