Title:

Comments: "Oh beautiful for spacious skies for amber waves of grain, for purple mountains majesties above the fruited plain"

This has been one of the few national songs that actually makes me feel patriotic. When I sing it I literally see the magnificence of our land in vivid color. The song is about the beauty, and the abundance we are blessed with. We must preserve this. In that picture I don't see livestock grazing away on much of the Great Plains.

When we consider increasing the capacity for certain privileged people access to our mutual treasure, we must be sure that at the very least we are enforcing strict rules and holding these potential robbers accountable to follow these rules.

Making this decision wisely, with an eye to the future requires slow breaths and much deep meditation before making changes that might permit the diminishment or destruction of our bounty.

The agency should demand vacant allotments to be permanently closed and should protect Wilderness, other public lands, and wildlife by limiting, rather than increasing, inappropriate livestock grazing.

The Rangeland Management Directives have the potential to significantly affect millions of acres of public land, including Wilderness, where livestock grazing is fundamentally at odds with the mandate of the Wilderness Act that Wilderness remain "untrammeled."

Livestock grazing on National Forests, including millions of acres of Wilderness, significantly degrades our public lands. Impacts from grazing must be fully examined and addressed through a transparent, public process that complies with federal laws, including the National Environmental Policy Act.

Any revisions to Forest Service grazing policies should encourage and prioritize voluntary grazing permit retirement to reduce permitted livestock grazing across the National Forest system, including within Wilderness, so as to protect Wilderness, other public lands, and wildlife.

The FS should not return grazing to the excessive levels permitted in the 1960s when it is clear conditions oftentimes cannot support increased, or even current, grazing levels.

The Forest Service must develop policies that ensure the agency will maintain authority for grazing management decisions and hold grazing permittees accountable for the impacts their livestock has on public lands.

The recovery of imperiled or threatened species needs to be prioritized on National Forests and livestock grazing managed so as not to jeopardize species' recovery.

This leftover Trump administration proposal to increase grazing would not only fuel livestock grazing's contribution to the climate and biodiversity crises, but runs directly counter to the Biden Administration's 30x30 land conservation agenda by sacrificing what could be protected lands to the commercial livestock industry.

The Forest Service must do the right thing for Wilderness, other public lands, and wildlife by dropping its proposed Rangeland Management Directives.

If the Forest Service wishes to amend its directives, the Forest Service must undertake a more comprehensive rulemaking process that complies with the National Environmental Policy Act.

Thank you for taking the time to read and think about my comment.
